WELCOME TO THE HER TECH NEWSLETTER!

We are happy to present you the third newsletter of the project Her Tech, Her Terms. Engagement as the key.

New research, new insights!

Understanding what encourages girls and women to choose ICT – and what continues to hold them back – is central to the HER TECH project.

In recent months, project partners have examined policies, educational initiatives and successful practices across Europe to identify the factors that make a real difference.

We are pleased to share **two key publications** that present the initial findings of this work and offer valuable insights for educators, researchers, policymakers and organisations working towards a more inclusive digital future.

Transnational Research Report

This report presents the first comprehensive overview of existing research, national policies and initiatives aimed at improving gender balance in ICT education and careers across Europe.

Drawing on evidence from partner countries, it examines how different approaches have been implemented, what results they have achieved, and which challenges remain. The report also identifies common trends and opportunities that will inform the next stages of the HER TECH project.

Compendium of Best Practices

What makes an initiative truly successful in engaging girls in ICT?

This publication showcases inspiring examples from across Europe, highlighting educational programmes, mentoring initiatives, coding clubs and community projects that have demonstrated positive results. It explores the factors behind their success and offers practical inspiration for educators and organisations looking to create more inclusive and engaging learning environments.
